Apply Configuration

Type and Networking

Server Configuration Type

Choose the correct server configuration type for this MySQL Server installation. This setting will define how much system resources are assigned to the MySQL Server instance.

Config Type: Development Computer

Connectivity

Use the following controls to select how you would like to connect to this server.

☒ TCP/IP
Port: 3306
X Protocol Port: 33060

☒ Open Windows Firewall ports for network access

☐ Named Pipe
Pipe Name: MYSQL

☐ Shared Memory
Memory Name: MYSQL

Advanced Configuration

Select the check box below to get additional configuration pages where you can set advanced and logging options for this server instance.

☐ Show Advanced and Logging Options

Apply Configuration

Authentication Method

☒ Use Strong Password Encryption for Authentication (RECOMMENDED)

MySQL 8 supports a new authentication based on improved stronger SHA256-based password methods. It is recommended that all new MySQL Server installations use this method going forward.

Attention: This new authentication plugin on the server side requires new versions of connectors and clients which add support for this new 8.0 default authentication (caching_sha2_password authentication).

Currently MySQL 8.0 Connectors and community drivers which use libmysqlclient 8.0 support this new method. If clients and applications cannot be updated to support this new authentication method, the MySQL 8.0 Server can be configured to use the legacy MySQL Authentication Method below.

☐ Use Legacy Authentication Method (Retain MySQL 5.x Compatibility)

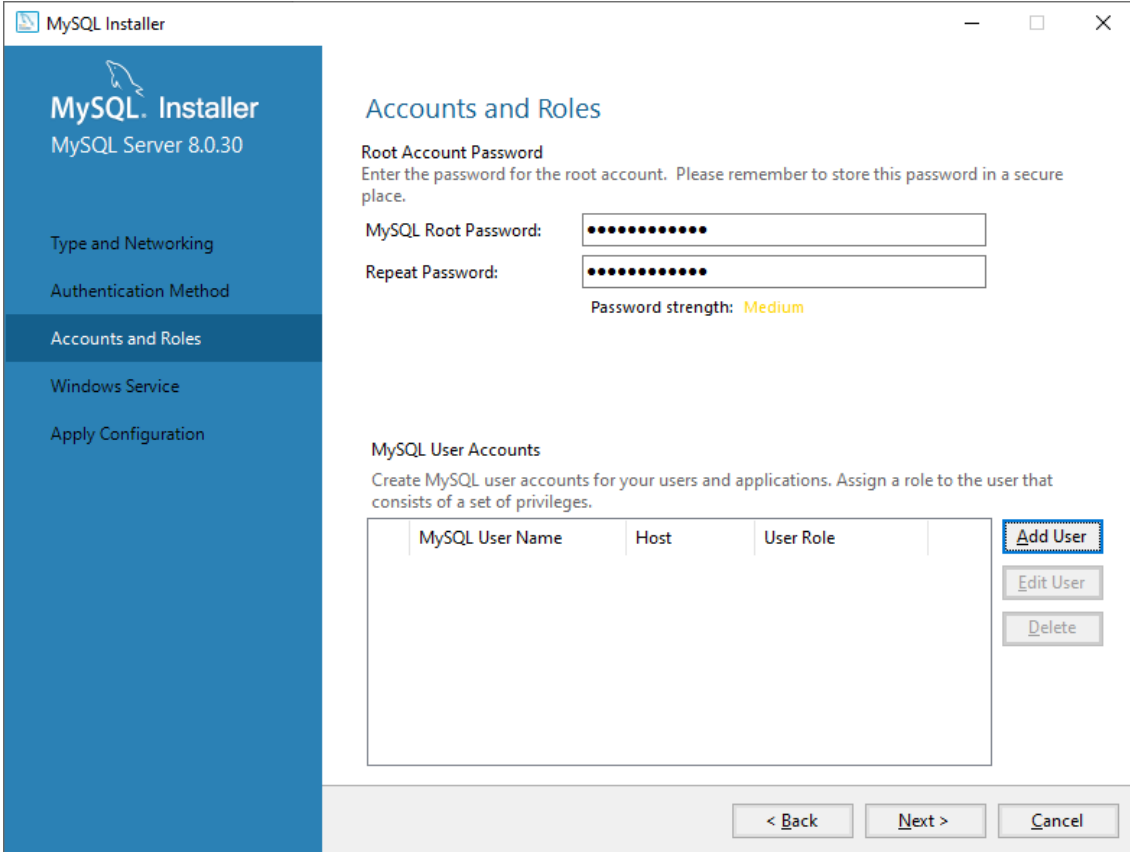

Using the old MySQL 5.x legacy authentication method should only be considered in the following cases:

- If applications cannot be updated to use MySQL 8 enabled Connectors and drivers.
- For cases where re-compilation of an existing application is not feasible.
- An updated, language specific connector or driver is not yet available.

Security Guidance: When possible, we highly recommend taking needed steps towards upgrading your applications, libraries, and database servers to the new stronger authentication. This new method will significantly improve your security.

Root / Password1234

The screenshot shows the 'Accounts and Roles' step of the MySQL Installer. The left sidebar contains the following menu items: 'Type and Networking', 'Authentication Method', 'Accounts and Roles' (highlighted), 'Windows Service', and 'Apply Configuration'. The main area is titled 'Accounts and Roles' and includes a section for 'Root Account Password' with two password input fields and a 'Password strength: Medium' indicator. Below this is a section for 'MySQL User Accounts' with a table for user management and buttons for 'Add User', 'Edit User', and 'Delete'. The table has columns for 'MySQL User Name', 'Host', and 'User Role'. At the bottom are '< Back', 'Next >', and 'Cancel' buttons.

Windows Service

☒ Configure MySQL Server as a Windows Service

Windows Service Details
Please specify a Windows Service name to be used for this MySQL Server instance. A unique name is required for each instance.

Windows Service Name:

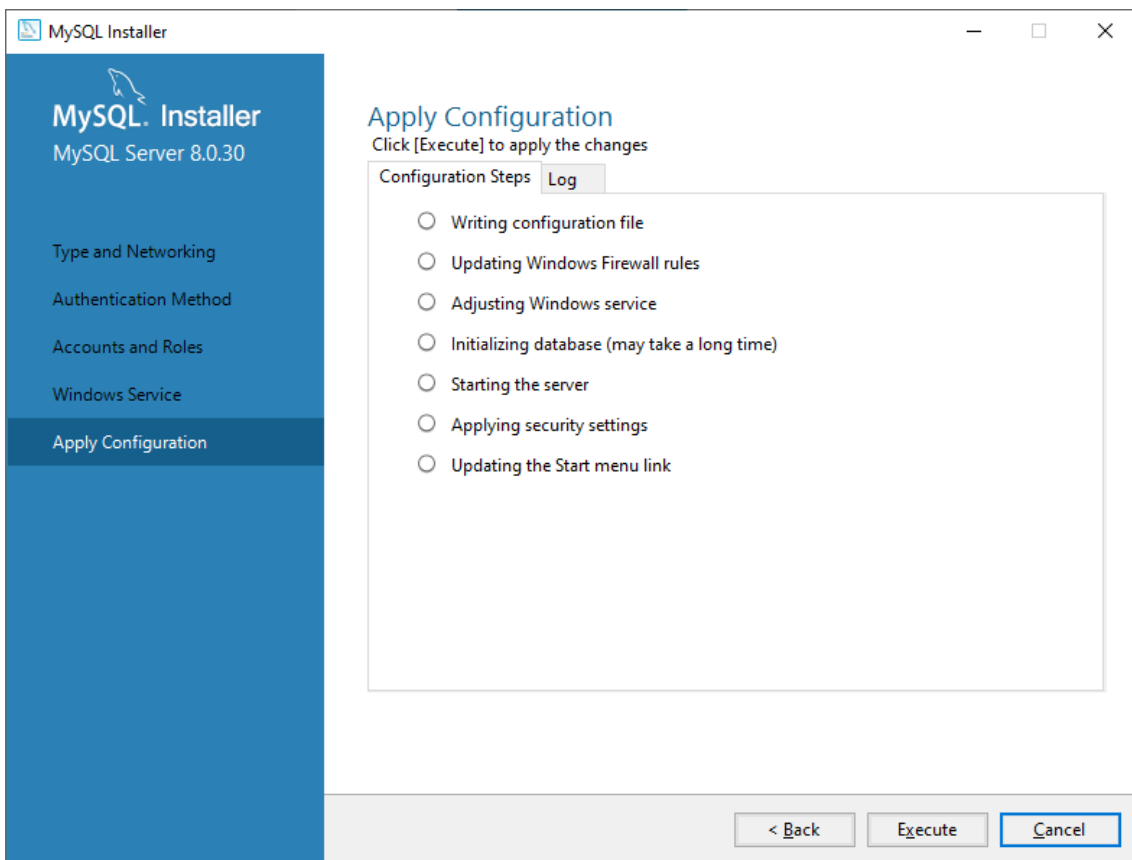

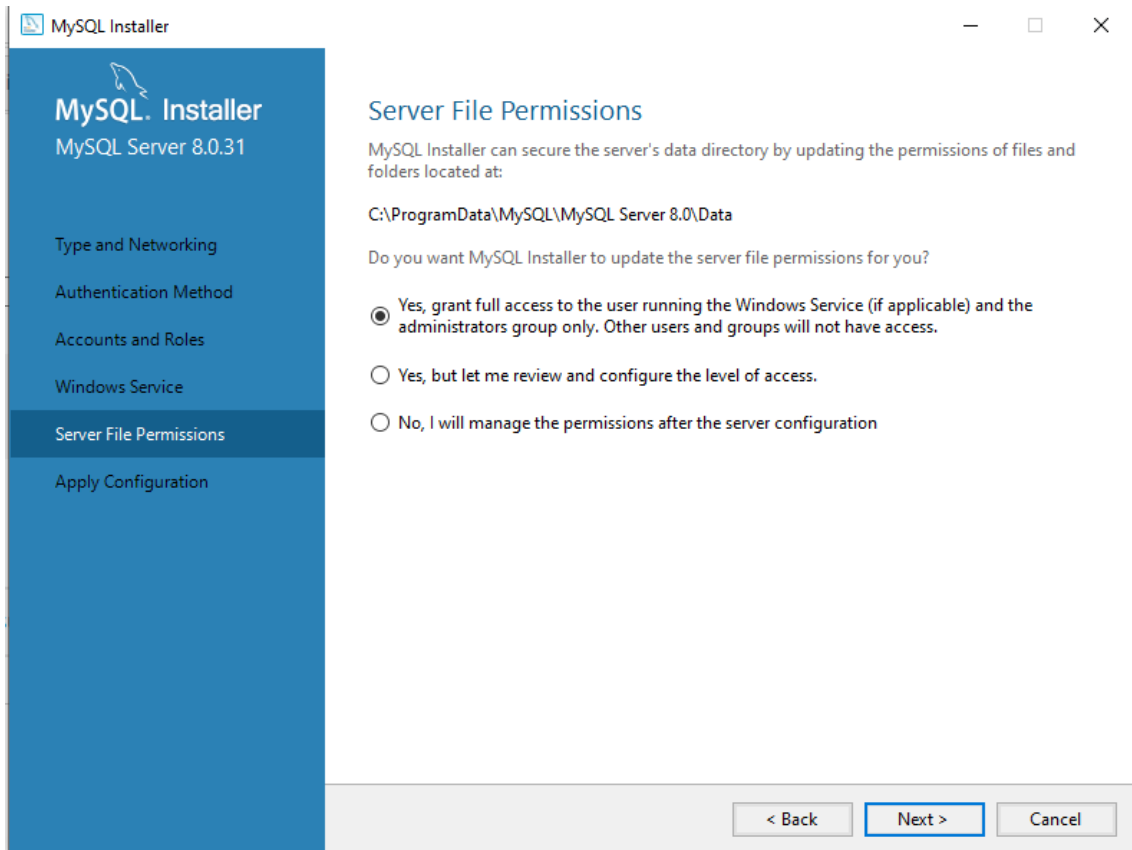

☒ Start the MySQL Server at System Startup

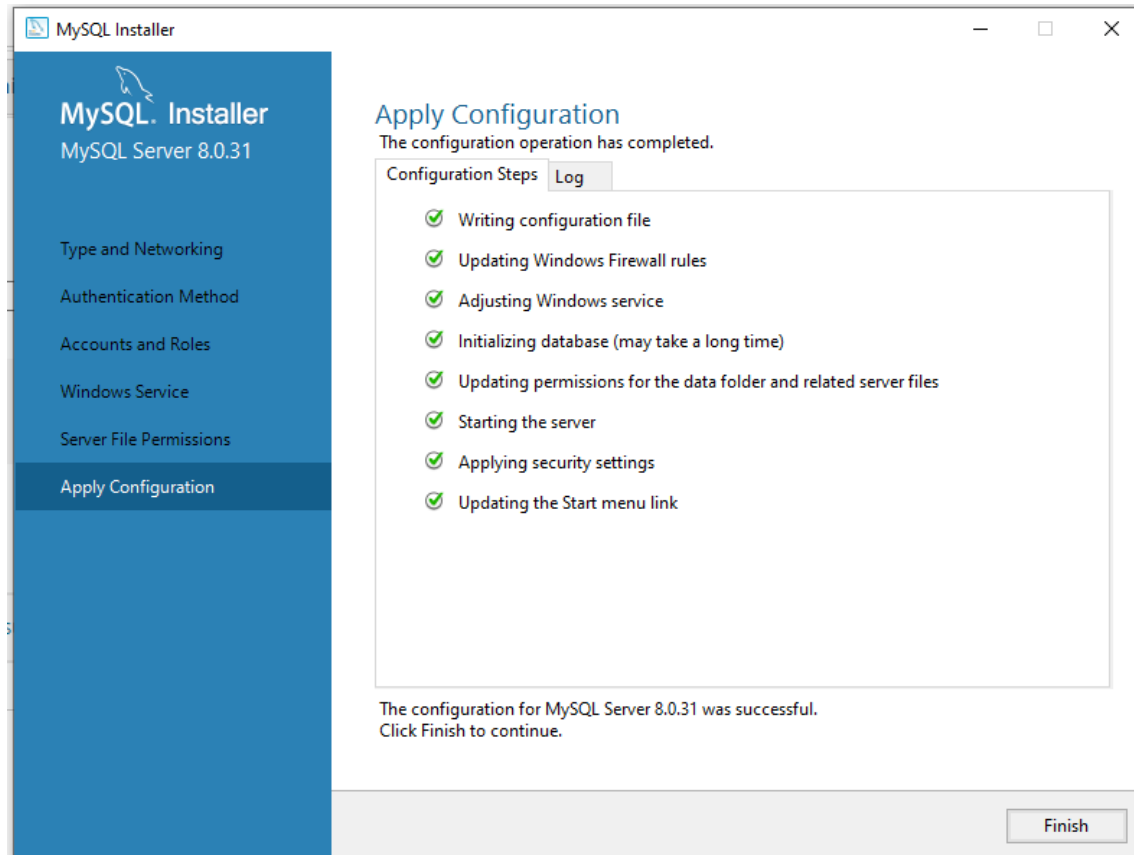

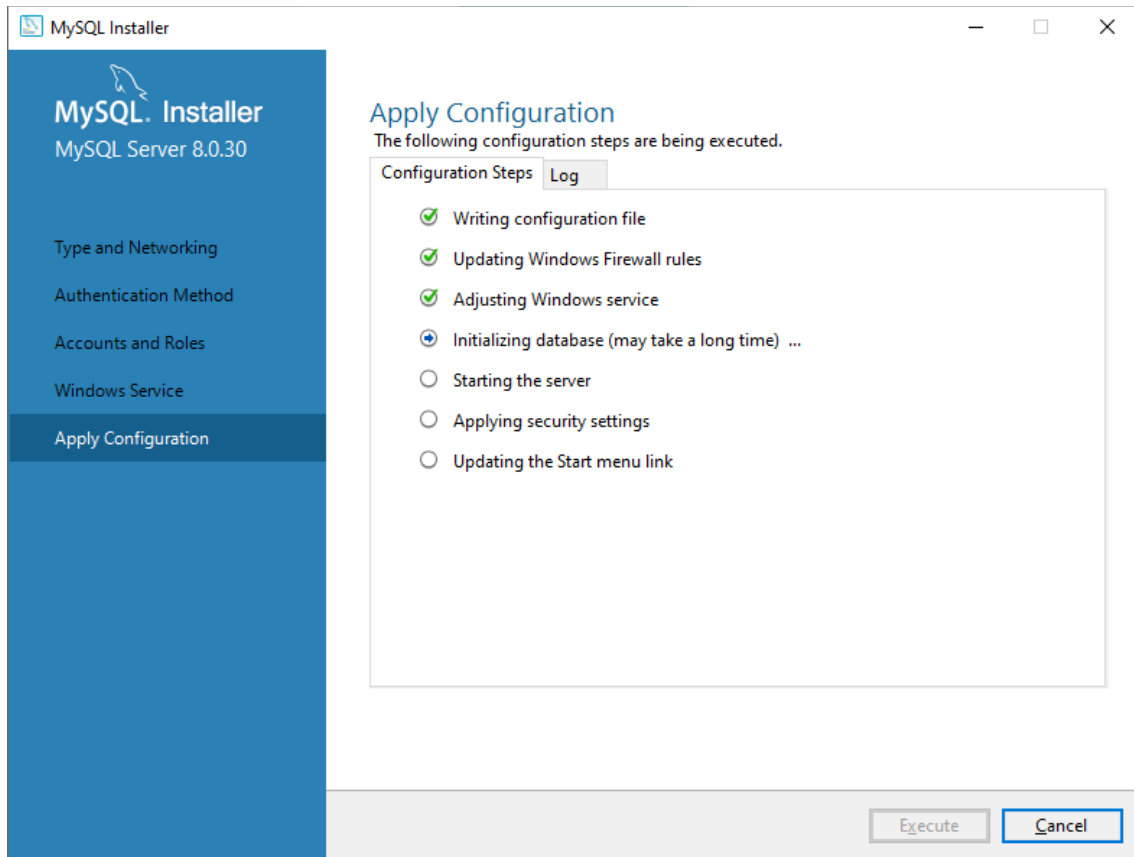

Run Windows Service as ...
The MySQL Server needs to run under a given user account. Based on the security requirements of your system you need to pick one of the options below.

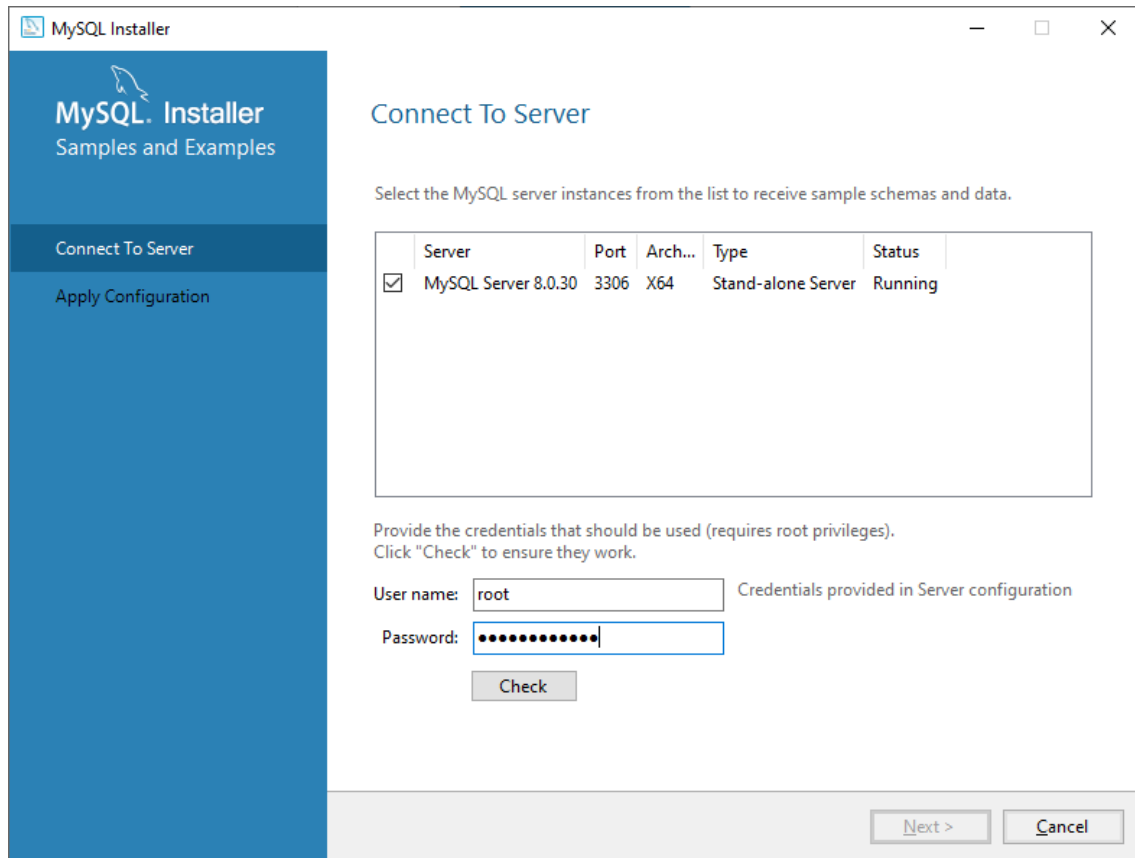

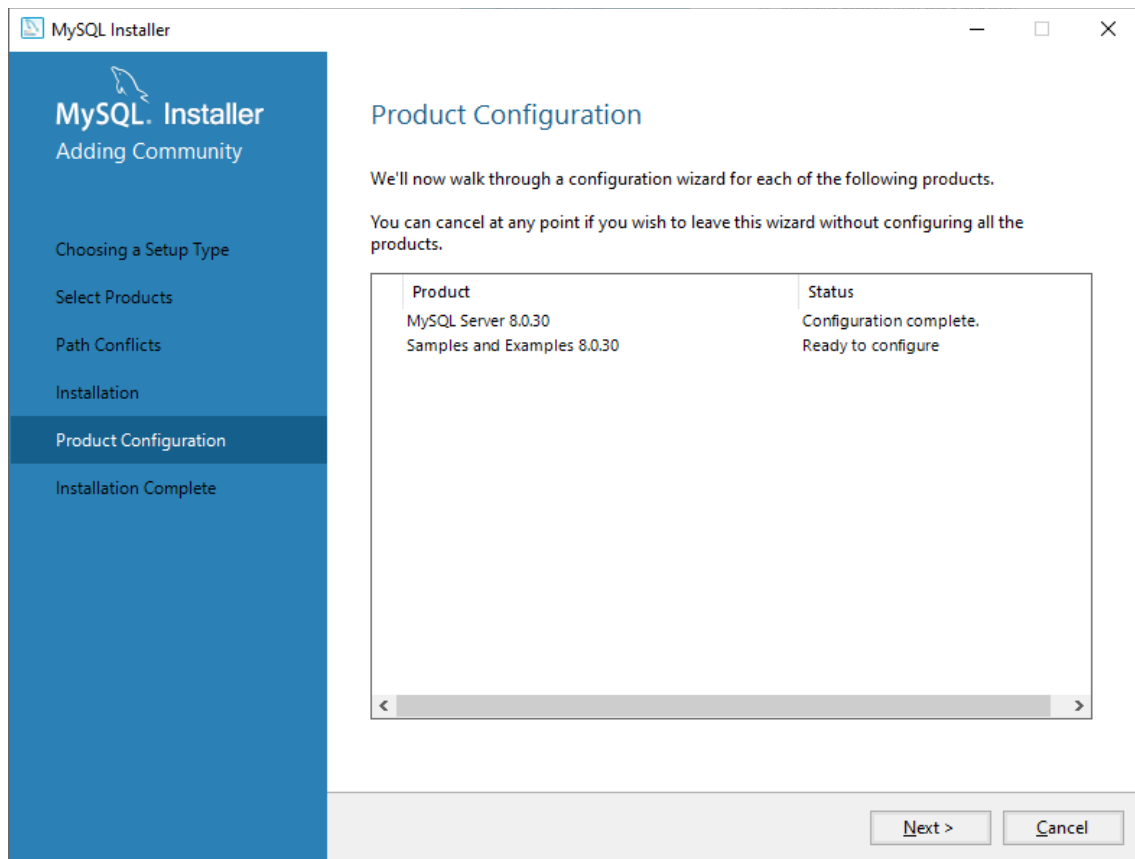

☒ **Standard System Account**
Recommended for most scenarios.

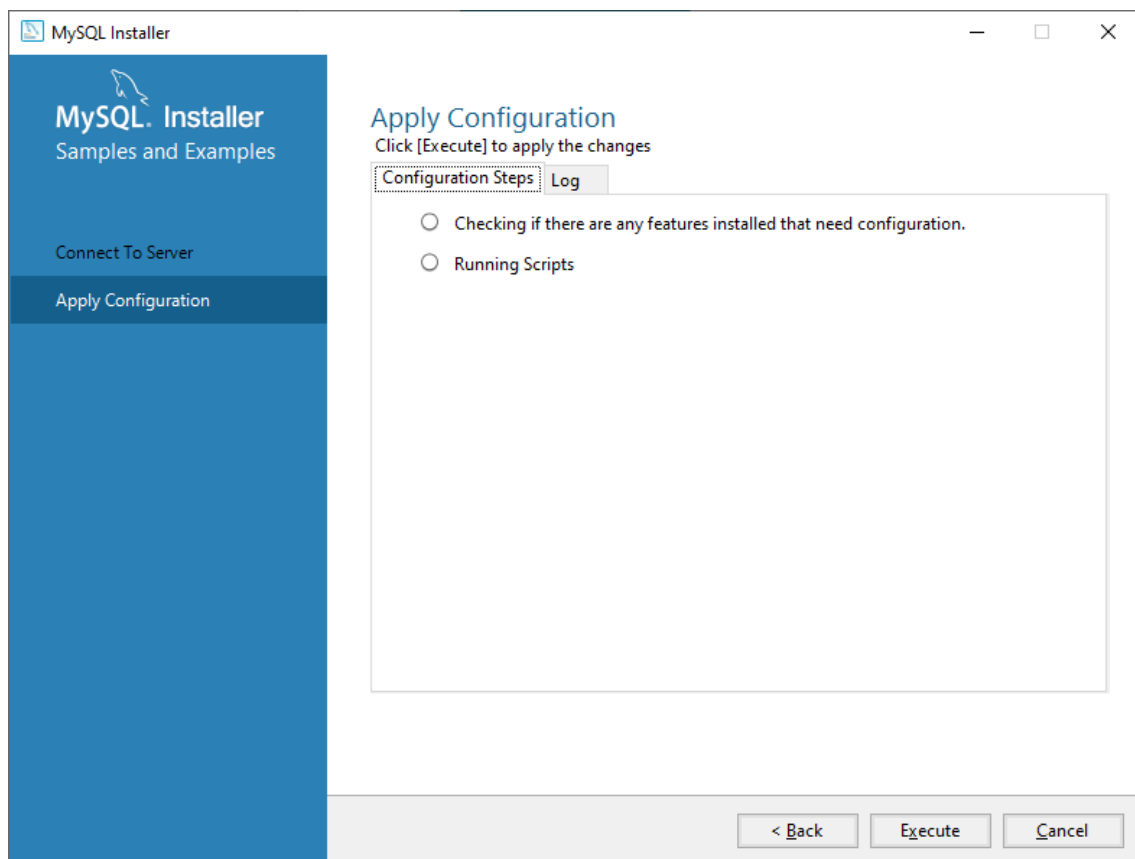

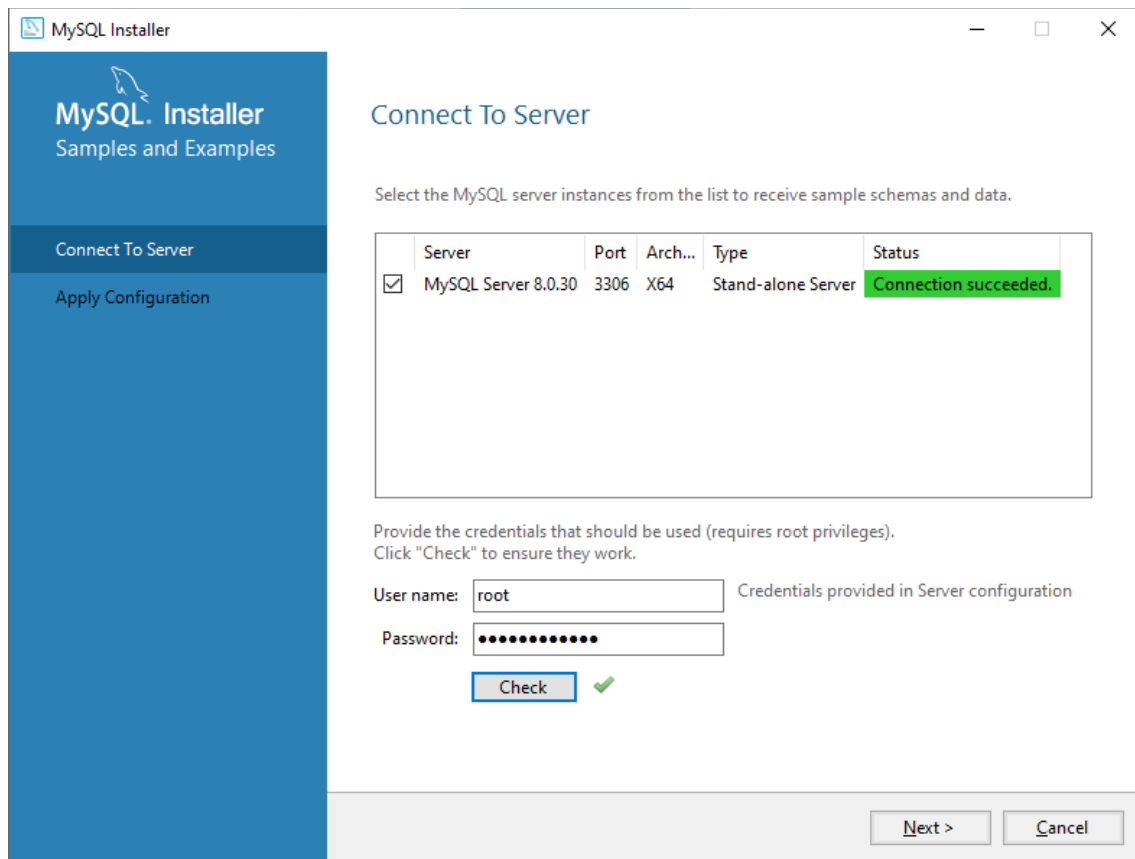

☐ **Custom User**
An existing user account can be selected for advanced scenarios.
